

DIGITALISING MOBILITY AND INTERNATIONAL NETWORKS WITH OPEN EDUCATION

# DIONE

## Newsletter

2 | Nov 2021

## Project status

Over the last six months, we have been working hard to turn our idea of DIONE into reality. What does that mean in concrete terms? We are developing Open Educational Resources for short-term teaching collaborations (micro-collaboration) with a digital focus.

### Micro collaboration

Micro collaboration is the new term for short teaching collaborations in which students work together transnationally. The concept aims to develop a format that enables any teacher to conduct cross-border teaching collaborations: cooperations that neither require joint study programmes nor the introduction of new courses into existing study regulations. Therefore, we develop formats that are as short and low-threshold as possible, so that they can be easily integrated by everyone into their own teaching.

### What do we develop?

On the one hand, we offer OER in various languages for the humanities (currently mainly in linguistics) - an area in which OER have hardly ever been available in good quality. The OER come fully customisable, modularised and can be combined in a variety

of ways. The OER include theoretical introductions, methodological elements and a strong focus on digital competencies.

On the other hand, the course kits also include pre-configured **scenarios** for concrete teaching collaboration. Here we offer course designs, activities and tools for a wide variety of collaboration constellations: synchronous and asynchronous, monolingual and multilingual, at the same and at different study levels, with parallel and with shifted semester periods, inverted and classical classrooms.

### Where are we now?

Since the project started in March, we have developed a draft competency framework for research competencies. This is currently being subjected to a reality check in the planning of the course units. A detailed description of the framework can be found on page 3.

We are currently in the process of creating the first of a total of twelve planned courses - and will test them extensively in pilot collaborations during the summer semester. We present three of the courses on page 4.

Check our website for more detailed descriptions and up-to-date news:

### Coordination

Dr. Philipp Wasserscheidt

Department of Slavic and Hungarian Studies  
Humboldt-University of Berlin

[philipp.wasserscheidt@hu-berlin.de](mailto:philipp.wasserscheidt@hu-berlin.de)

Philipp Wasserscheidt has been appointed **academic lead** for Humboldt University for the work package 6 of the European University Alliance Circle U., which works on the future of higher education. More info on the WP and the connected Think and Do Tank can be found here:

Sarah Hayes

I am **Kristel Van Goethem**, Senior Research Associate of the Belgian Fund for Scientific Research (F.R.S.-FNRS) and Associate Professor at the Université catholique de Louvain in Belgium. I teach in the fields of Dutch morphology, Linguistic theory and Contrastive linguistics. My research focuses on evaluative morphology from a Construction Grammar theoretical perspective. It often involves a contrastive or a second language acquisition perspective and makes use of up-to-date methods in corpus linguistics.

I initially joined the DIONE team because of

common research and teaching interests with Philipp Wasserscheidt in the fields of Construction Grammar and Corpus linguistics, but thanks to DIONE I had the opportunity to meet many new colleagues from all corners of Europe. I sincerely believe DIONE is making a crucial contribution to promoting international cooperation and digitizing mobility in times when frequent travelling is being challenged by the corona and the climate crisis. I expect that the UCLouvain team will make a fruitful contribution to the DIONE project in our fields of expertise and that, at the same time, we will improve our own digital skills thanks to the project. Finally, I hope that the DIONE project will deliver high-quality outcomes that will prove useful to both university teachers and students.

I am **Jelena Filipović**, a professor of Spanish and Sociolinguistics at the Department of Iberian Studies of the Faculty of Philology, University of Belgrade. My research interests are in the areas of critical sociolinguistics, language policy and planning, gender studies, Sephardic studies, Hispanic and applied linguistics. I have authored, co-authored and co-edited fifteen books, and published several dozens of articles in academic journals and monographic publications. Also, I have been a visiting professor at the University of Tulsa, USA, Graduate School, Purdue University, USA, UNAM, México, and Graz University, Austria.

the areas of language and language education policies (minority language policies, gender sensitive language policies, foreign and second language teaching curriculum design and development), collaborative knowledge construction and academic maturation, and language maintenance and revitalization. I am an international expert of the European Center for Modern Languages (ECML) and a member of the Board of Education of the Serbian Academy of Sciences and Arts.

Over the past 25 years I have been engaged in a number of national and international projects in

I am **Philipp Wasserscheidt**, a researcher and lecturer at the Institute for Slavic and Hungarian Studies at the Humboldt University in Berlin. As a Slavist, I conduct research on language contact, syntax and pragmatics. I work mainly within the frameworks of Construction Grammar and Frame Semantics using corpus linguistic methods. The creation of digital resources, especially spoken corpora, is also a subject that I am passionate about.

I have been strongly involved for years in the development of networks, exchange programmes and teaching

cooperations with the countries of the so-called Western Balkans and, since this year, also in the European University Alliance Circle U. European integration across political lines of conflict and administrative hurdles is a major concern of mine. DIONE was also born out of this idea. Based on an initiative by Jelena Filipović, a concept has emerged that is intended to facilitate seamless and ubiquitous internationalisation with a focus on state-of-the-art skills. I am very happy to be leading this project and hope to contribute towards making sure that one day we will actually live in one Europe.

**Raúl Ruiz-Cecilia** is an Associate Professor (tenured) in Language and Literature Teaching at the University of Granada. His research interests focus on multicultural literature, reading in a foreign language, gender studies, and ICT and language learning. He has been a visiting scholar in Berkeley University (2007) and Harvard University (2008). He has taught in Italy, France, UK, Germany, Portugal, and Greece. He is currently the Head of the Department Didáctica de la Lengua y la Literatura.

previous work on the professional development of foreign language student teachers, and on account of a perceived need to create bridges among European partners, he has embarked on the DIONE project aimed at fostering and improving teachers' digital competence so that they can cope with technology-based ways of teaching. This is a great opportunity to collaborate with European colleagues and set the basis for potential transnational teaching exchanges which may benefit teachers and students no matter where they live.

# IO2: Contents for our course kits

Output No. 2 is the central focus of DIONE. It aims at creating learning units on selected topics from the fields of language, literature and cultural studies. The topics will be combined with the research-relevant (digital) competences defined in IO1.

These OER will contain topic-competence combinations that can be well integrated into existing or planned courses: they do not contain completely basic information nor are they too specific. Thus, they are ideally geared toward a topic-oriented virtual teaching collaboration.

At DIONE, however, we do not simply create OER, but offer conceptual added value. On this page you will find three examples of OpenCourseWare – and what we add.

## Kit "Figurative language"

The course "Figurative language" will focus on topic-centred collaboration at Masters level. The content will guide students through the different dimensions, theories and implications of figurative language and introduce them to examples from various linguistic contexts: taboos, ideology, language acquisition, humour, irony, similes and others. The course includes an overview of the development and key concepts in the study of figurative language and a series of thematic units linked to the respective method, for example discourse analysis and corpus linguistics.

### Structured units

Learning units in DIONE are usually based on university teaching. Each unit offers content and methodological elements as well as tasks and instructions for teachers. Units in the course "figurative language" are introduced by an introductory video and a clear formulation of the learning objectives. The main element is then an input unit followed by a test. As an interactive element that can be integrated into the teaching, an assignment, a small project or similar application-oriented activity is designed for each unit.

## Kit "Multilingualism"

The course "Multilingualism" introduces the topic from two perspectives: On the one hand, societal multilingualism, which is linked to ethnicity, language policy, language minorities and standard language ideology. On the other hand, individual multilingualism, which ranges from language learning to language use and identity construction.

Through the thematisation of multilingualism, the course raises awareness of an understanding of the value and the challenge of multilingualism and highlights personal and political means to secure multilingualism, empirically demonstrated on historical and contemporary case studies.

### Multiple audiences

Ideally, DIONE courses should also be offered in a version for a non-specialist and non-university audience. With the course on multilingualism, we are responding to one of the requirements of the European University Alliance Circle U., which has identified the future of higher education with a focus on multilingualism as one of its core topics. Through the course, non-linguists in the university will be able to understand the basic characteristics of both societal and individual multilingualism. This knowledge is also of current relevance for lifelong learning, so the course will also be offered in both academic and popular scientific language formulations.

In addition to the topic-oriented course kits, there will be at least one metacourse that deals with research methods in general and is linked to the individual courses as they exemplify the methods. This course will address both more qualitative methods such as interviews, action research, oral history and focus groups and more quantitative methods such as corpus analysis, linguistic experiments and intervention studies.

## Kit "Construction Grammar and Corpus Linguistics"

The course will include both an introduction to Construction Grammar, arguably the most dynamic grammatical theory at present, and an introduction to corpus-based constructional analysis. The pilot course in the summer semester 2022 faces the difficulty that the semesters in Berlin and Louvain overlap by only 4 weeks.

### Modular structure

The course kits in DIONE will be modularised for maximum flexibility of use. In this course, in addition to the general introduction into Construction Grammar, it will be possible to select different methods for one's own teaching. Likewise, the examples of the introductory part will be accessible in

Schema of the method-centered 4 weeks micro-collaboration with a flexible module on theory added before or after the collaboration

modules which, on the one hand, go into more detail on different linguistic levels (e.g. morphology, syntax, text) and, on the other hand, present these examples in different languages. Currently planned are Dutch, German and Serbian examples. The course will be cross-linked with other course topics such as figurative language.

All course units will of course be made available as full-fledged OER. The content will be provided in different formats and will always be fully decomposable. Users can therefore adapt all content – be it images, maps, presentations or videos.
